

DATASET_ANALYSIS_OVERVIEW

MENTAL HEALTH DATASETS COMPREHENSIVE ANALYSIS

Healthcare Data Analytics Internship Project

Project Focus: Mental Health Analytics & Insights

Total Datasets Analyzed: 58 CSV files

Total Data Size: ~35 MB

Analysis Date: January 27, 2026

DATASET CATEGORIZATION

1. GLOBAL PREVALENCE DATASETS (Core Epidemiological Data)

These datasets provide worldwide prevalence rates for major mental health conditions across countries and years.

2. BURDEN OF DISEASE DATASETS

Measuring disability-adjusted life years (DALYs) and mortality rates from mental health conditions.

3. DEMOGRAPHIC BREAKDOWN DATASETS

Age-group and gender-specific prevalence data for detailed population analysis.

4. TREATMENT & INTERVENTION DATASETS

Coverage gaps, treatment approaches, and healthcare resource availability.

5. SOCIAL & BEHAVIORAL DATASETS

Public attitudes, help-seeking behaviors, and social support systems.

6. HEALTHCARE INFRASTRUCTURE DATASETS

Mental health workforce, facilities, and policy implementation data.

7. INDIVIDUAL-LEVEL CLINICAL DATASETS

Patient-level data with clinical scores and risk assessments.

KEY INSIGHTS SUMMARY

Data Coverage

- **Temporal Range:** 1990-2020 (30+ years of data)
- **Geographic Scope:** 195+ countries and territories
- **Population Groups:** All ages, both genders, various demographics
- **Conditions Covered:** Depression, Anxiety, Bipolar, Schizophrenia, Eating Disorders

Data Quality Indicators

- Standardized metrics using WHO and IHME methodologies
- Age-standardized rates for international comparability
- Consistent coding systems (ISO country codes)
- Regular temporal intervals (annual data)

Analytical Opportunities

1. **Trend Analysis:** Long-term prevalence changes (1990-2020)
 2. **Geographic Comparison:** Country-level disparities
 3. **Demographic Analysis:** Age and gender differences
 4. **Healthcare Gap Assessment:** Treatment vs. prevalence ratios
 5. **Policy Impact Evaluation:** Correlation with mental health policies
 6. **Risk Factor Identification:** Social determinants of mental health
-

RECOMMENDED ANALYSIS APPROACHES

Phase 1: Descriptive Analysis

- Prevalence mapping by region/country
- Temporal trend visualization
- Demographic distribution analysis

Phase 2: Comparative Analysis

- High-burden vs. low-burden countries
- Gender disparities in prevalence/treatment
- Income-level correlations with outcomes

Phase 3: Predictive Modeling

- Risk factor identification
- Treatment gap prediction models
- Healthcare resource allocation optimization

Phase 4: Policy Insights

- Cost-effectiveness analysis
- Intervention prioritization
- Resource distribution recommendations

This document serves as the master index for all individual dataset analyses
