

UPDATES_SUMMARY

UPDATES COMPLETED

INTERFACE IMPROVEMENTS MADE

I've updated the Mental Health Prediction System with your requested improvements:

IMPROVED LAYOUT:

- **Responsive design** - Inputs and results panels now properly scale
- **Better column organization** - Dynamic resizing with proper row/column structure
- **Optimized space usage** - Both sides of the interface now utilize space effectively
- **Cleaner grouping** - Related fields grouped together with proper spacing

MODEL INFORMATION ADDED:

- **Available Models:**
 1. Decision Tree Classifier
 2. Logistic Regression
 3. K-Nearest Neighbors (KNN)
 4. Support Vector Machine (SVM)
- **Model Details** in the "System Status" tab:
 - How each model works
 - Their advantages
 - Model selection process
 - Training features used
 - Prediction capabilities

FILE MANAGEMENT:

- Created `mental_health_predictor_updated.py` with all improvements
- Original file remains available as backup

VISUAL IMPROVEMENTS:

- Better organized input groups
- More intuitive layout flow
- Proper column scaling
- Enhanced usability

The system now has a much cleaner, more responsive interface that utilizes screen space better, and includes comprehensive information about the machine learning models being used! 🚀
