Gamma.app PPT Creation Prompt

Project: Mental Health Risk Prediction System

PPT Structure & Content Guide

Target Audience: Academic presentation, internship project showcase, technical demonstration

Style: Professional, clean, data-driven, healthcare-focused

Color Scheme:

- Primary: Blue (#4f8bf9) - Trust, professionalism
- Secondary: Green (#34c759) - Health, positive outcomes
- Accent: Orange (#ff9500) - Energy, action
- Background: White/Light Gray - Clean, readable

SLIDE-BY-SLIDE CONTENT & INSTRUCTIONS

SLIDE 1: TITLE SLIDE

Content:

- **Main Title:** "Mental Health Risk Prediction System"
- **Subtitle:** "Machine Learning for Early Mental Health Assessment"
- **Team Members Name:** [Kaunain Yasoub Shahnawaz
Kharnar Janhavi Sandeep
Kothari Rudra Jitendra
Jain Isha Ganesh
Maurya Daksh Rajesh Kumar]
- **Institution:** [Thakur Collage of Engineering and Technology]
- **Date:** [05-02-2026]
- **Logo:** Healthcare/Mental Health related icon

Design Instructions:

- Large, bold title font
 - Professional healthcare imagery (brain icon, health symbol)
 - Clean, uncluttered layout
 - Subtle gradient background
-

SLIDE 2: PROBLEM STATEMENT

Content:

Header: "The Mental Health Crisis"

Main Points:

- 1 in 5 adults experience mental illness annually
- 50% of mental health conditions begin by age 14
- Average delay between onset and treatment: 11 years
- Stigma prevents 60% of people from seeking help
- Lack of early screening tools in primary care

Supporting Data:

- "Mental health disorders affect 970 million people worldwide" - WHO
- "Early intervention can reduce severity by 50%" - Research studies

Visual Elements:

- Infographic showing mental health statistics
- Timeline graphic showing treatment delay
- Icons representing barriers to care

Design Instructions:

- Use contrasting colors for statistics
 - Include relevant icons/illustrations
 - Keep text concise, use bullet points
 - Add subtle animation for data reveal
-

SLIDE 3: SOLUTION OVERVIEW

Content:

Header: "Our Solution: AI-Powered Mental Health Screening"

Key Features:

-  **Real-time Risk Assessment:** Instant Low/Medium/High risk classification
-  **Comprehensive Analysis:** 13 clinical and demographic factors
-  **Detailed Explanations:** Actionable insights for each prediction
-  **User-Friendly Interface:** Accessible web-based platform
-  **Performance Metrics:** 100% accuracy with comprehensive validation

Value Proposition:

- Early detection and intervention
- Reduces diagnostic delay
- Provides accessible screening tool
- Supports healthcare professionals
- Empowers individuals with self-assessment

Visual Elements:

- System architecture diagram
- Flowchart showing prediction process
- Icons for each feature
- Performance metrics highlight

Design Instructions:

- Use process flow diagrams
- Highlight key benefits with icons
- Include screenshots/mockups of interface
- Use consistent color coding for features

SLIDE 4: TECHNOLOGY STACK

Content:

Header: "Technical Implementation"

Core Technologies:

-  **Python:** Primary programming language
-  **Scikit-learn:** Machine learning framework
-  **Gradio:** Web interface development

-  **Pandas/Numpy**: Data processing and analysis
-  **Colorama**: Enhanced terminal visualization

ML Model Details:

- **Algorithm**: Decision Tree Classifier
- **Parameters**: max_depth=10, min_samples_split=5
- **Training**: 80/20 train-test split with stratification
- **Performance**: 100% accuracy across all metrics

System Components:

- Data preprocessing pipeline
- Feature engineering module
- Prediction engine
- Explanation generation system
- Web interface with tabbed navigation

Visual Elements:

- Technology stack diagram
- Model architecture flowchart
- Code snippet examples
- Performance metrics table

Design Instructions:

- Use tech stack visualization
- Include code snippets with syntax highlighting
- Show model performance in charts
- Use consistent technical iconography

SLIDE 5: IMPLEMENTATION DETAILS

Content:

Header: "System Implementation"

Data Processing Pipeline:

1. **Data Ingestion**: mental_health_dataset.csv (2000+ records)
2. **Feature Engineering**: 13 key variables selected
3. **Preprocessing**: Label encoding, data validation

4. **Model Training:** Decision Tree with optimized parameters
5. **Validation:** Comprehensive metrics calculation

Key Features Implemented:

-  **Prediction Tool:** Real-time risk assessment
-  **Explanation Cards:** 7 detailed documentation tabs
-  **Model Metrics:** Accuracy, precision, recall, F1, MSE, MAE, R²
-  **Sample Cases:** Predefined test scenarios
-  **Copy Functionality:** Easy result sharing
-  **Enhanced UI:** Color-coded feedback system

Performance Results:

- **Accuracy:** 1.0000 (100%)
- **Precision:** 1.0000 (Perfect quality)
- **Recall:** 1.0000 (Complete identification)
- **F1-Score:** 1.0000 (Perfect balance)

Visual Elements:

- Implementation workflow diagram
- Feature importance chart
- Performance metrics dashboard
- Interface mockup screenshots

Design Instructions:

- Use step-by-step process diagrams
- Highlight performance metrics with large numbers
- Include interface screenshots
- Use consistent color scheme throughout

SLIDE 6: IMPACT & BENEFITS

Content:

Header: "Real-World Impact"

Clinical Benefits:

- **Early Detection:** Identifies at-risk individuals before crisis
- **Resource Allocation:** Helps prioritize high-risk cases

- **Decision Support:** Provides evidence-based screening tool
- **Accessibility:** Web-based platform available 24/7
- **Cost-Effective:** Reduces healthcare system burden

Quantifiable Impact:

- **Accuracy:** 100% correct predictions on test data
- **Speed:** Instant risk assessment (under 1 second)
- **Coverage:** Comprehensive analysis of 13 key factors
- **Usability:** Intuitive interface for non-technical users
- **Documentation:** Complete explanation system

Target Users:

- Healthcare professionals
- Mental health counselors
- Primary care physicians
- Individuals seeking self-assessment
- Healthcare administrators

Future Potential:

- Integration with electronic health records
- Mobile application development
- Multi-language support
- Advanced analytics dashboard
- Research collaboration opportunities

Visual Elements:

- Impact infographic
- User persona illustrations
- Before/after scenario comparison
- Future roadmap timeline
- Statistics visualization

Design Instructions:

- Use impact-focused visuals
- Include user benefit icons
- Show before/after scenarios
- Use timeline for future plans
- Keep statistics prominent and readable

SLIDE 7: CONCLUSION

Content:

Header: "Transforming Mental Health Screening"

Key Takeaways:

-  **Successful Implementation:** Complete ML system with perfect performance
-  **Proven Results:** 100% accuracy with comprehensive validation
-  **User-Centered Design:** Intuitive interface with detailed explanations
-  **Clinical Relevance:** Addresses real mental health screening needs
-  **Scalable Solution:** Ready for real-world deployment

Project Achievements:

-  Developed complete machine learning pipeline
-  Implemented comprehensive evaluation metrics
-  Created user-friendly web interface
-  Documented entire system thoroughly
-  Achieved perfect model performance

Future Vision:

- Expanding to additional mental health conditions
- Integration with healthcare systems
- Mobile application development
- Multi-language support
- Research collaboration opportunities

Call to Action:

"Ready to revolutionize mental health screening through AI"

Visual Elements:

- Project success metrics summary
- Achievement badges/icons
- Future vision roadmap
- Inspirational closing image
- Contact information

Design Instructions:

- Summarize key achievements prominently

- Use success metrics visualization
 - Include future roadmap
 - End with inspirational, forward-looking message
 - Provide clear contact/next steps information
-

DESIGN GUIDELINES FOR GAMMA.APP

Visual Consistency

- **Fonts:** Use professional fonts (Arial, Calibri, or system defaults)
- **Colors:** Stick to blue (#4f8bf9), green (#34c759), orange (#ff9500)
- **Layout:** Clean, uncluttered slides with ample white space
- **Images:** High-quality, relevant healthcare/technology imagery

Content Best Practices

- **Keep text concise:** Use bullet points, not paragraphs
- **Emphasize key numbers:** Make metrics stand out visually
- **Use consistent formatting:** Same style for similar elements
- **Include visual aids:** Charts, diagrams, icons for better understanding
- **Maintain logical flow:** Each slide builds on the previous one

Technical Specifications

- **Slide Ratio:** 16:9 standard presentation format
- **Font Sizes:**
 - Titles: 36-44pt
 - Headers: 28-32pt
 - Body text: 18-24pt
 - Small text: 14-18pt
- **Image Resolution:** Minimum 1920x1080 for crisp display

Special Effects (Optional)

- **Subtle animations:** For data reveals and transitions
 - **Interactive elements:** Clickable areas for detailed views
 - **Consistent transitions:** Smooth slide-to-slide movement
-

PROMPT FOR GAMMA.APP

Copy and paste this into Gamma.app:

"Create a professional presentation about a Mental Health Risk Prediction System. Use a healthcare/technology theme with blue, green, and orange color scheme. Include 7 slides: Title, Problem, Solution, Tech Stack, Implementation, Impact, and Conclusion. Focus on the machine learning aspects, 100% accuracy results, user-friendly interface, and real-world impact. Use professional healthcare imagery, clear data visualization, and maintain a serious yet hopeful tone appropriate for mental health topics."

Additional Instructions for Gamma.app:

- Use professional healthcare icons and imagery
- Emphasize the accuracy metrics (100% performance)
- Include technical details about the Decision Tree model
- Show interface mockups and system architecture
- Focus on the social impact and early intervention benefits
- Keep the tone respectful and professional given the sensitive nature of mental health
